BoldenanTM

Boldenone Undecylenate

For I.M. use only

Formula : $C_{30}H_{44}O_3$

Molecular Mass : 452.67 g/mol

Active Half-Life : 16-17 Days

Anabolic Activity : 100%

Androgenic Activity : 50%

Dosage : 400-1200mg per week

Description : Boldenone undecylenate is an injectable steroid that exhibits strong anabolic and moderately androgenic properties. The well-balanced anabolic and androgenic properties of this drug are greatly appreciated by athletes, who want to enhance their result without strong side effects. Boldenone greatly stimulates hematopoiesis. Elevated levels of red blood cells improve oxygen delivery to the muscles. This makes this steroid attractive not only for bodybuilders, but also for track and field athletes. Among bodybuilders, Boldenone is appreciated not only for his ability to promote lean and dense muscle growth, but also for its peculiarity to significantly raise appetite and promote vascularity. Boldenone has an incredibly long active life, requiring less frequent injections and is often used as a part of very long cycles.

Methandienone

Rx Only

10
mg

Formula : $C_{20}H_{28}O_2$

Molecular Mass : 300.44 g/mol

Active Half-Life : 6-7 Hours

Anabolic Activity : 200%

Androgenic Activity : 50%

Dosage : 20-40 mg per Day

Description : Methandienone has the effect of decreasing the steroid's affinity for sex hormone binding globulin. As a result, methandrostenolone is significantly more active than an equivalent quantity of testosterone, resulting in rapid growth of muscle tissue. However, the concomitant elevation in estrogen levels – a result of the aromatization of methandrostenolone – results in significant water retention. Hence, do not forget to perform blood works and use an aromatase inhibitor. In summary, this is a very good drug, and a potent tool for quick gains or retaining gains when used properly and safely.

Oxandrolone

Rx Only

10
mg

Formula : C₁₉H₃₀O₃

Molecular Mass : 306.44 g/mol

Active Half-Life : 8-10 Hours

Anabolic Activity : 400%

Androgenic Activity : 25%

Dosage : 50-100mg per day

Description : Oxandrolone is an oral 17-alpha-alkylated steroid, modification of dihydrotestosterone. It was firstly synthesized for the treatment of debilitated HIV-infected patients, for persons with Turner syndrome, anaemia, for bones strengthening and recovery from burns. Oxandrolone does not yield to aromatization and is not estrogenic itself. This drug is beloved by athletes, who prepares for competition in strength and endurance sports, where lean muscle without water and fat are needed. Oxandrolone cycle won't help athletes gain colossal muscle volumes; however, it is a perfect compound for getting rid of fat and giving the body a more relief look. Despite the fact that anavar is 17-alpha-alkylated, it causes gentle toxic impact on the liver. Researches have shown that taking oxandrolone at 20 mg per day for twelve weeks did not cause statistically important raise in AST and ALT. So, oxandrolone side effects show very rare, though oxandrolone results are also not significant. It is probably the mildest and safest oral steroid available today for sale, hence, it is perfect for the first acquaintance with anabolic steroids.
